

JORDAN SPRINGFLOW®

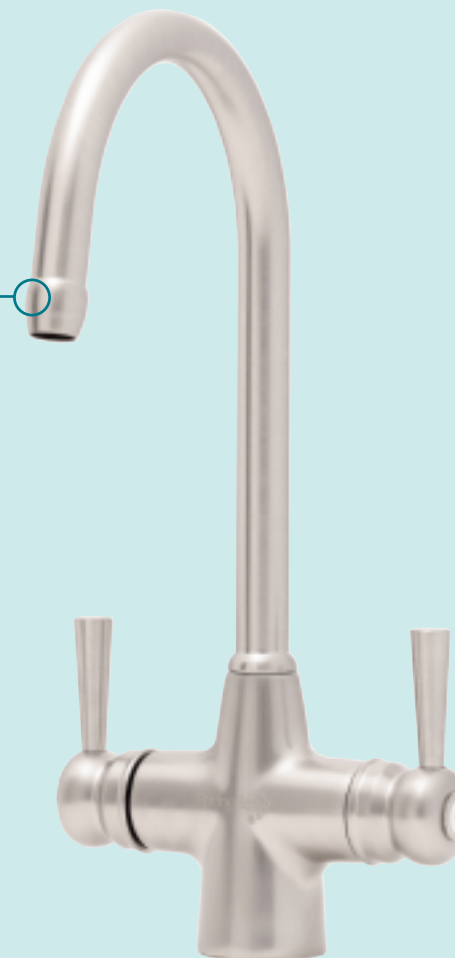

Monobloc filter tap

At the turn of a handle Astracast's Springflow taps dispense an endless supply of refreshing, crystal clear water. Astracast's patented valve system means there is no additional handles or fuss.

The Filter unit fits discreetly under the sink and attaches conveniently to the existing supply using simple push fit connectors.

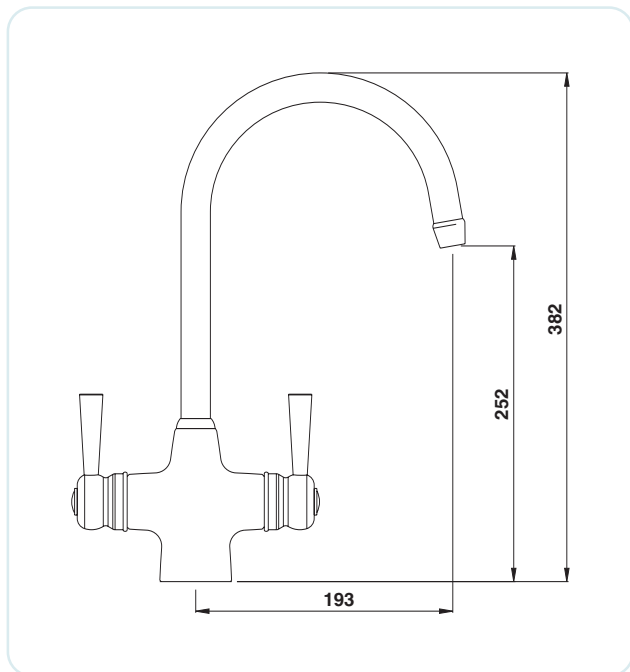

Clean, attractive lines and a long spout make the Jordan a striking member of Springflow family. Both finishes complement this popular tap that works well against so many contemporary and more traditional environments. It boasts solid easy reach handles for efficient operation and a rotating swan neck that allows accurate flow direction.

Available in the stunning Chrome and Brushed Steel finishes.
